CONVEGNO TEMATICO

MILANO

7 - 9 FEBBRAIO 2024

**ASSOCIAZIONE
ITALIANA DI
ARCHEOMETRIA**

ORGANIZZATO DA

CON IL PATROCINIO DI

SPONSOR

COMITATO SCIENTIFICO

Simone Caglio – Libero professionista
Anna Galli – Università degli Studi di Milano Bicocca
Anna Gueli – Università degli Studi di Catania
Alessandra Guglielmetti – Università degli Studi di Milano
Mauro Francesco La Russa – Università della Calabria
Carmine Lubritto – Università degli Studi della Campania Luigi Vanvitelli
Jeannette Jacqueline Lucejko – Università di Pisa
Donata Magrini – ISPC CNR Firenze
Marco Martini – Università degli Studi di Milano Bicocca
Rosa Celeste Ponterio – CNR – Istituto per i Processi Chimico Fisici
Gianluca Quarta – Università del Salento
Alessandro Re – Università degli Studi di Torino

COMITATO ORGANIZZATORE

Letizia Bonizzoni – Università degli Studi di Milano
Simone Caglio – Libero professionista
Valeria Comite – Università degli Studi di Milano
Anna Galli – Università degli Studi di Milano Bicocca
Marco Gargano – Università degli Studi di Milano
Francesco Maspero – Università degli Studi di Milano Bicocca
Laura Panzeri – Università degli Studi di Milano Bicocca

Programma

SOMMARIO

Datazione assoluta e relativa	9
Fission Track Dating of obsidian samples from Lipari Neolithic settlements	11
Optimization of the sample selection procedure of historical mortars for radiocarbon dating	12
Advance in radiocarbon dating of mortar: non-destructive identification of calcite origin by micro-Raman spectroscopy and machine learning	13
Challenges in radiocarbon dating of Pompeian pozzolanic mortars	14
Twenty years of 14C-AMS dating at INFN-LABEC, Florence	15
Exploring Luminescence Dating of carbonate fractions in historic mortars	16
Preparation and characterization of archaeological mortars for radiocarbon dating: the case study of decorated plasters from Pollena Trocchia (Campania region)	17
Late Antiquity Florence: a case study on necropolis outside the ancient roman walls	18
CASTLES Project: a multidisciplinary study on the chronological transformation of the Medieval Castles in Italy	19
The complex link between the successful dendrochronological dating of a violin and the properties of its front plate	20
Chronological insights: unraveling the History of Tumshukayko, a Monumental Andean Site, by Optically Stimulated Luminescence	21
Reconstructing the past geomagnetic field's variation in Asia as a tool for archeomagnetic dating	22
Rediscovering A Long-Forgotten Fresco by Giotto	23
Radiocarbon Dating of Magnesian Mortars: The case of San Salvatore in Massino Visconti (NO), Italy	24
More on Mortar: the study of Capiate site with statistical and deconvolution analysis	25
Another brick in a Vitrified Walls	26
New radiocarbon dates reveal Brînzeni I cave's oldest past	27
Archaeomagnetic dating: Does archaeointensity determination improve the dating precision? Insights from an ancient kiln excavated at Ceva (Northern Italy)	28
When Absolute dating and indirect dating methods converge to magnify the archaeometric results: the case of the Eleousa icon from the Cefalù Cathedral	29
Datazione indiretta e autenticazione	31
Combining RX results and historical-artistic features to recognize the attribution of XVII century wooden crucifixes: materials and techniques of the Fra' Umile production	33
The scan of relative chronologies of ancient buildings through the analysis of mortars processed by multivariate statistics. The case of The Sarno Baths in Pompeii.	34
Advanced analytical techniques to unravel the origin and dating of a presumed Caucasian floral carpet	35
Phoenician head pendants: Contextualizing archaeological and collection pieces	36
Bridging the Gap: multidisciplinary insights into long-term climate variability using shallow-water sediments in the Magra river delta, Liguria, Northern Italy	37

A Bridge between the Pillars of Hercules: Dating an Ancient Quranic Manuscript	38
Stylistic dating and compositional analysis of the two understudied works by Benedetto Buglioni (1459/1460–1521) in Polish Collections	39
I materiali nel tempo: tecnologia, degrado e conservazione	41
Evaluation of possible conservation methods for the stone façade of St. Stephen Cathedral (Vienna) on the model of the St. Mark Basilica in Venice	43
Cultural Heritage Preservation and Sustainability: Conservation Strategies for "The Sassi and the Park of the Rupestrian Churches of Matera"	44
Elemental analysis of black crusts using Laser Induced Breakdown Spectroscopy for the determination of pollutant sources	45
The white illusion: archaeometric study and authentication of white decorations on bronze fibulae from Parre (BG)	46
Chemical degradation induced by the photo-aging of beeswax found as additive in multi-component archaeological adhesives	47
"A warning from Mars": effect of microclimate changes at the Specola Museum of Palermo	48
Stones of Comiso, Modica and Ragusa: Study of Characteristics and Durability of Calcarenes for the Conservation of the Iblean Heritage	49
A 3D Diagnostic Imaging Model (DIM) approach for the preservation of cultural heritage: the M3DEA vision	50
From macro- to micro-scale study and characterization of the 15th century painting Coronation of the Virgin	51
Rediscovering pigments and stratigraphy of the 15th century panel painting depicting the Coronation of the Virgin by Michele di Matteo	52
Monitoring and assessment of the state of preservation of bronze sculptures exposed outdoor	53
Microclimate Analysis of the King Apartment in Royal Palace of Turin	54
Underwater decay of archaeological stone in the Mediterranean Sea	55
The Study of Bone Remains and Fragments of Clothing from the Archaeological Monuments of the Ryazan-Oka Culture by Using a multi-analytical approach	56
Monitoring the conservation state and decay processes of works of art by means of CT reconstruction	57
Development of Polyphenol-containing Konjac Glucomannan Hydrogels for Cleaning Historical Wood Surfaces	58
Characterization of cosmetic pigments found in shells from Iron Age graves (SE Arabia)	59
Calibration of neutron techniques for the analysis of conservation state and manufacturing processes of ancient bronze artifacts	60
Strontium isotope analysis for pottery provenance studies along the Nile: does it work?	61
CIBA: the interdepartmental research center for cultural heritage at the University of Padova, where humanities and technical science meet	62
Tracing the evolution of street art materials: A study of contemporary mural paintings stratigraphies from Graffiti Alley (Ghent, Belgium) and Galeria del Arte Urbana (Lisbon, Portugal)	63

Painted architectural terracottas at the Northern Sanctuary of Cuma: preliminary results on the production technology from the Archaic to the Hellenistic period	64
Discovering the history of the wooden scene of the Teatro Olimpico in Vicenza: a multidisciplinary approach based on scientific analyses and HBIM	65
The importance of microclimate monitoring as a basis for preventive conservation: a case study over time	66
A liquid-anode X-ray source multi-technique setup for the non-invasive compositional and conservation state characterization of materials	67
In situ test for evaluation of protective film degradation, a study using thermographic spilling drop test	68
The challenge of 19th century iron gall inks: from their detection to the disclosing of ageing mechanisms by an ultrasensitive HPLC-DAD-HRMS method	69
Microclimatic and entomological monitoring for paper and parchment documents conservation: the case study of Diocesan Archives, Brixen/Bressanone	70
Diagnostic analysis of the three paintings by Artemisia Gentileschi created for the Cathedral of San Procolo in Pozzuoli (Naples)	71
Establishing an archaeological experimental collection: Exploring Ground Stone Tools analysis through different settings	72
Ultrasonic seismic waves to characterize calcarenitic stones	73
Non invasive investigation of frescos of the complex St. Mary of the Cave in Marsala (Trapani, Italy)	74
Diagnostic investigation for the characterization of artificial stone materials (mortars, plasters, bricks) from the "Teatro di Marcello" (Rome)	75
Ricostruzioni storiche e stratigrafia	77
The Thousand Arrows of Motya, a reference point for the Iron Age in the Mediterranean	79
New insights on the Western production of Ionian cups type B2	80
Study and radiocarbon dating of the Romanesque architecture in the church of Santa Maria Assunta in Sorenago (Ticino, Switzerland)	81
OSL dating of alluvial sediments at Cahuachi (Southern Peru) not reconciling the paradigm of catastrophic mega-floods for the decline and end of the Nasca Theocracy	82
Preliminary petrographic, mineralogical and geochemical characterization of mortars from public buildings in Pompeii aiming at relative chronology	83
The use of stone resources in the Roman architecture in Oderzo (Treviso, Italy)	84
Archaeometric investigations on bronze artefacts from Acerra, Campania (Southern Italy): early results	85
An innovative application of laser micro-cleaning on pyrite crystals in lapis lazuli to allow provenance study	86
Mortar characterization for radiocarbon dating within the PRIN 2020 CASTLE Project	87
Archaeometry of bricks of the UNESCO World Heritage Site of Urbino (Marche, Italy)	88
Multianalytical investigations to understand the changes of a wall which layer by layer becomes pictorial support: the case of Bicci di Lorenzo found in Cerbaia (Florence)	89
The glass mosaic of S. Martino ai Monti: new data in the complex scenario of early Medieval Rome	90

Characterization of the stone tesserae from the “A grandi fiori” Mosaic in the archaeological site of Casignana (Reggio Calabria, Italy)	91
Evoluzione delle tecniche Diagnostiche nel tempo	93
Comparative analysis of three-dimensional digitalization techniques for the exhibition of an Egyptian mummy of the Museo Egizio di Torino	95
Multi analytical approach for in situ non-invasive analyses on orichalcum ingots from Mediterranean Sea	96
From waste to resource: fabrication of flexible and low-cost SERS sensors for Cultural Heritage materials	97
Advanced isotopic techniques to investigate Cultural Heritage: The research activities at the iCONa laboratory.	98
Recent advances in neutron resonance transmission imaging and heritage science application	99
Macroscopic FT-IR, UV and XRF mapping for the in situ characterization of pictorial materials: Technological advances and applications	100
Application and testing of coatings for the conservation of Underwater Cultural Heritage: new challenges within the TECTONIC project	101
Toward the monitoring of cleaning treatments on painted surfaces: the potential of macroscopic FT-IR mapping	102
To be or not to be? Open questions when the conventional approach is not working	103
Tecniche di elaborazione e analisi dei dati temporali	105
Climate-based damage functions for geoheritage preservation: data governance and analysis perspective	107
Comunicazione e fruizione dei beni culturali	109
A trustable multispectral photogrammetry pipeline for the reproduction of non-collaborative materials	110
The Aragonese Castle in Reggio Calabria Reconstructed: Laser Scanning, 3D Modeling, and Virtual Public Access	111
Indici	113

“A warning from Mars”: effect of microclimate changes at the Specola Museum of Palermo

Carotenuto Maria Rosalia - mariarosalia.carotenuto@unipa.it

The Specola Museum is located at the Palermo Astronomical Observatory and preserves most of its material heritage. It is part of the Museum System of the University of Palermo (SiMuA) and its management and conservation are entrusted to the INAF - Astronomical Observatory of Palermo. Among the historical instruments on display, there is a 19th-century painted wooden globe reproducing the surface of Mars. It has been on display in a showcase, inside the Merz Telescope Hall, for about 20 years without undergoing any type of intervention or evident deterioration sign. From 2021, in less than two years, damages of its pictorial layers occurred at a progressive rate. The European Standard EN 15757 explains that hygroscopic materials are highly vulnerable to microclimate changes. The wooden globe was in good conditions after two decades of permanence at the museum, but the recent control and management of the indoor climate was not compatible with the past climate history of the globe to which it has adapted.

The speed of the degradation made it evident that the microclimatic conditions of the room changed abruptly. The warning deduced from the Mars globe deterioration was hence easy to decode: there is something wrong with this climate!

It is well known that museum microclimate plays a key role in the conservation of the objects on display. It may trigger or aggravate degradation processes of the materials constituting the object exhibited and affect their “life expectancy”. Moreover, each object responds peculiarly to environment variability, depending on its composition and conservation history. When an artifact is composed of different materials, unexpected synergistic effects may develop. Finding appropriate values range of temperature, relative humidity and illuminance and managing them to guarantee the conservation of the entire collection, and at the same time improving the thermal comfort for people working there, is a difficult task. The issue becomes even more challenging in buildings not originally designed for conservation purposes, as the Specola Museum, located in the ancient observatory rooms, built in 1790 on the top of the 12th-century Royal Palace.

An accurate restauration has been made, and conservation measures have been adopted, to stop the serious deteriorating processes affecting the model of Mars but the risk of further deterioration phenomena involving other objects is expected to increase substantially if no actions are taken.

This contribution intends to present the results of the preliminary study concerning the thermo-hygroscopic records taken in the Merz Telescope Hall over the last two years and propose specific actions to improve its microclimate conditions.
