INVESTIGATING AND WRITING ARCHITECTURAL HISTORY: SUBJECTS, METHODOLOGIES AND FRONTIERS

investigation. Firstly, I study the relationship between school building and urban context; the evolution of the typology with respect to both technical and educational concerns; and the migration of ideas. Schools are strongly related to the evolution of urban theories and the debate on school building was linked to debates on the territory and its development, its economic growth and its demographic curve. The second path examines how architects, educators, and administrators created and disseminated an image of school bound to modern architectural forms and progressive methods of teaching, combined with a persistently romantic notion of childhood.

The close relationships with other countries have always played an essential role in Swiss culture. The dissertation therefore applies international comparison, looking into the network of exchanges that Swiss architects secured with the rest of the world, in particular with the so called 'creative periphery' (Joedicke 1959) – Denmark, Sweden and Finland – as well as with The United States and England in which the most progressive ideas on education and school buildings were being developed.

The archival research has been conducted primarily at the gta Archiv of the ETH Zurich, looking into the main protagonists of the Swiss debate on modern school buildings, such as Werner M. Moser and Alfred Roth. The literature studies provide an accurate survey of period journals on education and architecture, paying particular attention to the many special issues dedicated to the subject of schools in this period.

7.2.5 Star-Shaped Rib Vaulting in the Church of San Domenico, Cagliari

FEDERICO MARIA GIAMMUSO

Università degli Studi di Palermo, Italy – Universidad de Zaragoza, Spain

This research is focused on the monastery of San Domenico in Cagliari and its renovation carried out in the second half of sixteenth century. Founded in the settlement of Villanova on the east slope of the Castle of Cagliari during the second half of the thirteenth century, the monastery of San Domenico reached its maximum expansion in the late 1560s as a consequence of the Dominican reform movement. These large-scale reforms were due to multiple factors: economic development, administrative reforms (including the diocesan reorganization), medieval orders reforms and general religious reforms relating to the defunct Council of Trent which closed in 1563 (Manconi, 2010, 250-53).

The particular focus of the thesis is on the star-shaped rib vaulting of the church; a complex work which radically transformed the temple, previously covered with a wooden roof built over a diaphragmatic arch system. San Domenico suffered complete destruction during the Second World War and was rebuilt. The destruction, together with the shortage of available documentation of its building history, has prevented a proper interpretation of the church and its architecture. Because of this lack of documentation, the research has been based primarily on indirect archival sources, such as the Acts of the provincial and general chapters of the Order, the Dominican and Ecclesiastical chronicles and the *Liber I* of the General archive of Preachers in Rome. Some direct sources from the late sixteenth century were provided by local archives (Archdiocese and Municipal in Cagliari) and by the archive of the Crown of Aragon (Barcelona).

A key tool in this study has been the design of a 3D reconstruction of the building, making it possible to analyze the church as it would have appeared before its destruction. Virtual reconstruction techniques (Marsiglia, 2013), combining historical research tools and digital representation technologies, have been employed to understand the building process. This has allowed an interpretation of architectural details and constructive features and a comparative analysis of the church with respect to other monuments from the same time. The digital reconstruction has been based on metric data, collected using image-based 3D modelling methods (Remondino-El Hakim, 2006), and materials found in the Municipal archive of Cagliari as well as in

the Soprintendenza of Cagliari and Oristano's archives.

A very important part of the study concerns the reconstruction of the relationship between the monastery of San Domenico and the Dominican order. In particular, the research has focused on the Dominican reform movement in the province of Aragon (Esponera, 1999). Furthermore, the thesis investigates the relationship between the spiritual reform and the material renovation of the monasteries. The history of San Domenico well illustrates the dynamics that characterized the spread and evolution of the Mediterranean Gothic in Sardinia, from the introduction of churches with unique nave and chapels opened between buttresses of diaphragm arches, to the introduction of star-shaped ribs vaulting of the naves.

The final goal of the work has been to demonstrate that the appearance of star-shaped ribs in the late Sardinian *Cinquecento* religious architecture does not represent a delay or isolation of Sardinian architectural culture. Perhaps these episodes should not be classifiable as 'late Gothic' architecture at all. Instead, they might be understood as local interpretations of new Renaissance systems developing in mainland Italy and the Aragonese land (Ibáñez, 2008).

7.2.6 The Evolution of Domestic Space in Southern Italy and Sicily

SERENA GUIDONE

Università degli Studi di Padova

The research project is devoted to the evolution of domestic space in Southern Italy and Sicily, in the late classical to hellenistic period (from the middle of the fourth century to the middle of the first century BC), including both Magna Grecia and Italic sites (Russo Tagliente 1992; D'Andria-Mannino 1996). The analytic research is aimed at defining the peculiar characteristics of the domestic unit, providing a tentative reconstruction of the cultural models of reference. The research involves examination of twenty-eight sites and more than one hundred houses, highlighting the presence of different 'housing systems'. The houses examined present considerable typological and dimensional variations and are structured according to complex symbolic dimensions.

The vast majority of the examined houses derive from the Greek tradition, as for example the *pastas* and *peristilium* houses (Hellmann 2010). However, if we consider the development of a typical house over time, we can observe a series of structural changes that alter the primitive plan layout, introducing variations in the original template and, in some cases, in the dwelling's extension. This change can be linked to the gradual process of Romanization of the Southern part of the Italian peninsula; a process already underway around the end of the third century BC. The best examples of this change can be observed between the end of the second century and the beginning of the first century BC. An important part of the research is related to the diffusion of the *atrium domus*, both in Southern Italy and in Sicily. There is a great need to investigate more attentively the symbolic value of this house type in relation to the political and social context in which it spread.

From a methodological point of view, an unavoidable reference in the study of the private house is the description of the Greek and Roman house in literary sources (Pesando 1989; Coarelli 1989; De Albentis 1990; Gros 1997). Such sources are important to understand the dwelling's structural and functional aspects as well as the activities performed inside them. Furthermore, the study encompasses structural analysis, examinations of spatial and functional distribution, typology, and architectural language. The analyses take into account structural and functional modifications of the single unit as well as of the community as a whole, using such changes as
