

## Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Theoretical Background</b>	<b>3</b>
2.1 -	Parameters affecting scour phenomenon	3
2.2 -	Influence of typology of hydraulic structure on scouring	5
2.2.1 -	Equilibrium scour depth prediction	6
2.2.2 -	Prediction of time evolution of scouring	16
<b>3</b>	<b>Experimental setup and methodology</b>	<b>21</b>
3.1 -	Experimental setup	21
3.2 -	Experimental runs	25
3.3 -	Measurement Instruments	30
3.3.1 -	Profile Indicator – PV09	30
3.3.2 -	Laser Doppler Anemometer – LDA2D	32
3.3.3 -	Ultrasonic Velocimeter – DOP2000	36
<b>4</b>	<b>Bed Evolution</b>	<b>39</b>
4.1 -	Time evolution of scouring	39
<b>5</b>	<b>Flow Velocity Field</b>	<b>69</b>
5.1 -	Time-average flow velocity field	69
5.2 -	Distribution of the resultant time-average flow velocity	133
<b>6</b>	<b>Reynolds momentum flux and kinetic energy</b>	<b>147</b>
6.1 -	Introduction	147
6.2 -	Reynolds momentum flux	147
6.3 -	Mean flow Kinetic Energy and Turbulent Kinetic Energy	226
6.3.1 -	Kinetic Energy of the mean flow	226
6.3.2 -	Turbulent kinetic Energy	240
<b>7</b>	<b>Flow turbulence and scouring process</b>	<b>253</b>
7.1 -	Evolution of turbulent structures	253
7.1.1 -	Quadrant analysis and occurrence frequency of events	253
7.2 -	Bed shear stress distribution	269
<b>Conclusion</b>		<b>287</b>
