

- electrotherapy, ultrasound and laser therapy in its various forms.
- A single randomized trial demonstrated a modest short-term efficacy of magnetic therapy in the treatment of acute and chronic non-specific neck pain [11].
- TENS and ultrasound instead, lacking of systematic reviews, are recommended in combination with exercise therapy and other methods of physical therapy in chronic neck pain [12, 13].
- Laser therapy is recommended for the reduction of neck pain in the short term in both acute and chronic phases [14].
