22. Poster Presentations

- U-024 *Hollow Fiber Membranes for separation of Hydrogen and Carbon Dioxide*
Thomas Prangsgaard Andersen
- U-025 *Experimental and theoretical approach for evaluation of porous support resistance on the permeation of oxygen separation membranes*
Francesca Drago
- U-026 *A simple variable viscous-resistance model in analyzing gas flow/pore dewetting data*
Md Akhtarul Islam
- U-027 *Evaluation of the module geometry's influence on the separation performance for ultrafiltration processes*
Holger Thiess
- U-028 *BIFURCATION OF ELECTROCONVECTIVE VORTICES IN ELECTRODIALYSIS CELL*
Anna Kovalenko
- U-029 *A CFD-assisted analysis of profiled membranes performance in reverse electrodialysis*
Sylwin Pawlowski
- U-030 *Diffusive Permeability of Hybrid Cation-Exchange Membranes MF-4SC/Halloysite Nanotubes*
Galina Skorikova
- U-031 *THE RESEARCH OF SINGLE-CIRCUIT RECIRCULATION MEMBRANE-PSA OXYGEN ENRICHMENT SYSTEM*
Ivan Kurchatov
- U-032 *Characterization of ion-exchange membrane systems using voltammetric techniques*
Antonio A. Moya
- U-033 *Theoretical non-stationary model for ions transfer by neutralization dialysis process*
Anton Kozmai
- U-034 *DYNAMIC CHAOS IN ELECTROMEMBRANE SYSTEMS*
Mahamet Urtenov
- U-035 *A multi-physics modelling tool for Reverse Electrodialysis*
Luigi Gurreri
- U-036 *Cleaning of polyethersulfone membranes by saline solutions after enzymes ultrafiltration*
María-José Corbatón-Báguena
- U-037 *Integrated solution for reverse osmosis brine management: carbon dioxide stripping followed by membrane distillation*
Edxon Eduardo Licon Bernal
- U-038 *Membrane contactors for CO₂ capture: experimental validation at pilot scale and modelling issues*
Christophe Castel
- U-039 *A novel Reverse Electrodialysis application to generate power from lowgrade heat*
Alessandro Tamburini
- U-040 *Modelling of ampholyte transport through ion-exchange membrane under the action of direct current*
Ekaterina Belashova
