survived alone (66 years old, female)", "Every day I remind of people who sought and cried for help to me but were swept away by the tsunami. I regret that I survived by myself and could not help them (82 year's old, male)." Conclusion; Survivors guilt have shown to be a factor on PTSD and many other psychological distress. Individuals who were affected by a large-scale disaster have to live with sorrow for a long time. Providing support, help such as mental care is necessary for long-range.

Professional Work in Austere Healthcare in the UK- Preliminary Findings of a Qualitative Exploration into Physiotherapy in the National Health Service

The growth of managerialism, technological advance and the ageing population are woven into the reality of 20th-21st century healthcare. Following the global financial crisis in 2008, austerity measures and cuts to public spending have added to the challenges professional groups face in the health setting. Austerity poses a particular challenge to professional groups in a universally funded health system; emphases on cost effectiveness, productivity and evidence-based practice are not new or unique to austerity, though increasingly, the continued commissioning of individual health services is based upon such concepts.

Furthermore, austerity has the potential to impact on the technical nature of professional work, tacit knowledge and decision making due to its influence on resources, equipment, staff and the growing complexity of service users as a consequence of the wider societal implications of austerity. This paper will outline and discuss the preliminary findings of a qualitative exploration of professional work in the context of austerity in a publicly funded National Health Service (NHS) in the UK, examining the practices of physiotherapists, a profession allied to medicine.

Physiotherapy is a profession of interest due to its course of professionalisation and relative success in terms of their successful acquisition of autonomy from medicine in 1977, though are more vulnerable to marketisation compared to their nursing colleagues. Much of the investigation into the rise of managerialism and its effects on the professions is associated with the archetypal professions such as medicine. The professions considered subordinate or allied to medicine (such as physiotherapy) are subject to hierarchy and differing processes of professionalisation and thus, their ability to react to challenges to professional work may differ. This paper will examine professional autonomy, decision making and the implications austerity poses for the professionalisation of an allied health profession in times of growing economic uncertainty.

Women on the Run: Human Suffering and Empowerment during Their Travel Towards Italy

In Italy, in recent years, the attention to female in migration has been linked to the increase in the number of women who emigrate alone to look for work like men. Women who become *breadwinners*, provide economic resources for the needs of their families; women who give rise to chain migration, and also family reunions, in which husbands are reunited, to reach them. Women engaged in jobs that have an importance for the functioning of the receiving society, but also women who are present as refugees and asylum seekers, women on the increase in trafficking in human beings and trafficking for sexual exploitation.

Women have always emigrated, but today in the Mediterranean countries they are increasingly more vulnerable.

To simplify a complex picture, we could identify five different types of migrant women, in Italy:

1. women who came on their own with a work project (mainly from Eritrea, Ethiopia, Latin America, Philippines, women from Eastern Europe);
2. women belonging to predominantly male flows, who have come for family reunification (especially Moroccans, Tunisians, Senegalese, Ghanaians, Albanians ...) often willing to work;
3. women who came together with the spouses in a more familiar migration path and who are often included in economic-commercial ethnic activities and / or managed directly by the family (Chinese, Indian, Sinhalese);
4. refugees claiming for protection;
5. women arriving through the sex industry.

The paper will be divided into two parts. The first part will focus on the situation of female in migration in the Italian territory. The second one will focus on the analysis of 25 stories of women who crossed the Mediterranean on the boats to arrive in Italy.

Social Capital As an Intergenerational Asset

Background

Social capital is a valuable resource that previous research has associated with e.g. better school performance, prosocial behavior and subjective well-being. This study combines theories of Robert Putnam and Pierre Bourdieu to explore the origins of pre-adolescents' social capital. In line with Putnam, social capital is understood as a combination of (i) actual social relationships, (ii) overall trust on people and (iii) norms of reciprocity.

Research questions

To what extent is social capital an intergenerational resource?

What is the mechanism that can explain the transmission of social capital

H1: Parents' social capital is directly transmitted to their children

H2: Home socioeconomic background shapes young people's social capital

Data and methods

The study builds on a survey collected in South-Western Finland in spring 2018.

The data consists of 169 primary school students (12-13 years old) and their parents, the majority of whom have a middle-class background. The analysis is built with structural equation modelling on Mplus.

Results

The results suggest that social capital is partly an intergenerational asset. Parents' social capital directly relate to youngsters' propensity to reciprocate with others and their trust in other people. No evidence was found on the relationship between parents' social capital and youngsters' social networks. Socioeconomic background only has an indirect effect on youngsters' social capital, fully mediated by parents' social capital. Although, cross-sectional data are not adequate to confirm the causality or the direction of these relationships, the background theories and commonplace logic support this interpretation.

Conclusions

The study elucidates mechanisms interlinking social capital and socioeconomic background, and demonstrates the influence that parents' behavior has on their offspring's social capital. However, middle-class being over-represented in the sample, the results cannot be inferred beyond this group.

As Tuition Rises: Opposition to the Neoliberalization of Higher Education

Over the past two decades, every country in the OECD has tried to raise tuitions at public universities, as part of neoliberalism's broad retrenchment of the welfare state. Not all of these proposals were implemented. Opposition arose in almost all of these countries and blocked half of the tuition hikes. Using a new dataset, this study compares the process and outcome of opposition to tuition increases across all 34 OECD countries as of 2010, along with detailed case studies of three countries, in order to understand the potential for resistance against austerity policies in a neoliberal era. It compares partisan politics explanations developed in comparative study of welfare states with the political mediation model developed in social movement studies, and offers a new model to analyze policy outcomes that focuses on opposition alliances. The findings suggest that neoliberal policies may be vulnerable to opposition alliances between protesters outside of electoral institutions and opposition parties within the system, brokered by intermediary organizations – in the case of tuition increases, coalitions of student movements and opposition political parties, brokered by organized labor. These coalitions, combining contentious politics and institutional politics, require analyses that bridge the fields of political economy and social movement studies.

Higher Education Policy Protests in Turkey and Brazil: Targets and Alliances

The process of democratization and the role of social movements in this process have been widely studied by historians, sociologists, and political scientists. However, there is very little research on how social movements react to democratic backsliding; a government-led weakening of political institutions that supports an existing democracy. In this paper, I analyze the reactions of social movements to changes in higher education policy during democratic backsliding by focusing on Turkey and Brazil. In Turkey, the expansion of the role of Higher Education Council (YÖK) and the intervention to academic freedom by executive decrees that fired many dissidents from universities marked the hyper-centralization of the higher education policy. In Brazil, Bolsonaro's attack took the form

ZARTLER, Ulrike — RC06-79.3*

ZAVALETA, Jose Alfredo — RC29-355.5*

ZAWADSKY, Jose — RC28-332.6*

ZAWADZKA, Kinga — RC37-467.1*

ZAYED, Hany — RC23-271.5*

ZBIERSKI-SALAMEH, Suava — RC46-559.1*

ZELENEV, Evgenii — RC22-253.2

ZELINSKA, Olga — RC09-109.5*

ZEYER-GLIOZZO, Birgit — RC07-82.4*

ZHAKUPBAYEV, Madi — RC51-631.2*

ZHANG, Han — WG01-695.1*

ZHANG, Huanjun — RC41-517.3

ZHANG, Liwei — RC49-611.1

ZHAO, Yikun — RC37-467.4*

ZHENG, Yang — RC47-589.3

ZIELINSKI, Marcin — RC20-250.3*

ZIMMERMANN, Florian — RC28-337.3*

ZIMNY-SCHMITT, Daniel — RC24-302.1

ZINN, Jens — RC25-310.2*, TG04-745.2*

ZIPP, Daniel — RC24-297.1*

ZONTAG, Noam — RC28-338.3*

ZOUGBEDE, Emeline — RC30-366.2*

ZUBIZARRETA, Cristina (Cris) — RC11-137.1*

ZUCCATO, Marlies — RC06-79.3

ZUCCOTTI, Carolina V.
— RC55-673.1*, RC28-327.3*

ZULUETA, Johanna
— RC11-143.2*, RC31-381.3*

ŽUPARIĆ-ILJIĆ, Drago — RC24-295.2

ZVINGOWANISEI, Tsitsi — RC23-271.4*

ZVONOVSKY, Vladimir — RC23-272.3
