Instrumental Solidarity As a Strategy for Profit Accretion

Conflict produces group solidarity and facilitates collective action. We argue that it can be a manifestation of a collective need derived from a rational choice to attain capital. A study done on collectively oriented task groups consisting of women disclosed a behavior pattern of functional integration guided by reason and calculation to rationally arrive at a desired end which is profit accretion. Thus we propose to define this rationally motivated collective consciousness as instrumental solidarity. This analytical work is situated within the context of "micro-mobilization and participation" primarily focusing on the interrelation between collective identity, solidarity and commitment to make profit. The analysis is built upon a rigorous five year field trip to illustrate the construction of women enterprises in the context of Kerala, the southernmost state in India. The interpretive methods of inquiry aimed at constructing an understanding of the context. The findings of the study were corroborated using mixed method. Quantitative and qualitative data was gathered using 280 interviews, 38 in-depth interviews and 16 focus group discussions of women beneficiaries. Through this work we are constructing and assessing the concept of instrumental solidarity in terms of two general questions: What role does solidarity and commitment has to determine the multifaceted nature of collective identity? How does the instrumentality of solidarity maintain the collective identity?

El Auto-Cuido, La Auto-Generación y La Auto-Organización Comunitaria, De Los Adultos Mayores: Un Desafío Del Siglo XXI Para Mejorar La Calidad De Vida

Las personas adultas mayores forman parte de una población con alto grado de vulnerabilidad. Cada vez son más urgentes y pertinentes los estudios interdisciplinarios relacionados con dicha población, no solamente para conocer ese nivel de vulnerabilidad, sino para comprender la complejidad de la problemática y proponer programas integrales de apoyo encaminados a prevenir situaciones difíciles y/o solucionar sus necesidades y problemas. Ciertamente, el proceso de envejecimiento y la etapa de la vejez son ahora una realidad preocupante, sobre todo cuando la calidad de vida se ve mermada por falta de cuidados. Este trabajo presenta una propuesta interdisciplinaria para resolver el auto-cuidado, la auto-generación y la auto-organización comunitaria para el mejoramiento de la calidad de vida de los adultos mayores, asunto que es un desafío del siglo XXI. El trabajo responde a las preguntas: ¿Cómo podemos vivir juntos en un planeta limitado? ¿Cómo resolver los problemas de espacio de vivienda, de recursos económicos, de salud integral y de suministro de alimentos? Todos éstos son asuntos urgentes de resolver en esta población adulta mayor. El auto-cuidado, la auto-organización y la auto-gestión, son parte de la clave para transitar por el proceso de envejecimiento y la etapa de la vejez con salud y calidad de vida. El trabajo está basado en los resultados de un proyecto de investigación realizado en una casa de Retiro en el que conviven personas adultas mayores y donde se han logrado grados de auto-organización.

Loneliness, Disease and Poverty? Care and Self-Care Methodology in Order to Improve the Quality of Life in Older Adults

Older adults are considered a vulnerable population group. Every day many of them are poorer, alone and sick. That is why we must rethink care and self-care as a strategy to promote their health. Likewise, interdisciplinary studies related to this population are increasingly urgent and relevant, not only to know that level of vulnerability, but also because we must understand the complexity of the problem and propose comprehensive support programs aimed at preventing difficult situations. and / or solve your needs and problems. Certainly, the aging process and the stage of old age are now a worrying reality, especially when lack of attention decreases the quality of life of older adults. This work presents some characteristics of health self-care practices in older adults and methodologies to solve the improvement of their quality of life and some techniques to reduce discom-

fort or pain, for example. The work answers the questions: What do we talk about when we talk about care and self-care? Who needs care? How much attention is needed? How much should we take care of ourselves? Where are the limits? Who cares about care and caregivers in the aging process? How do we want to live in old age? Who will take care of us? Who are the caregivers? Who will take care of those women who took care of their partners, their children, their parents? What economic, physical and social cost does attention imply? Is it a careful and / or work job? A reflection on socially constructed knowledge regarding each of these questions is presented. The work is based on the results of a research project carried out in a retirement home where older adults live together and where degrees of self-care and shared care have been achieved.

Encontrar La Posición De Uno Mismo En La Sociedad: Una Encuesta Basada En Viñetas

Los indicadores para medir clase social o estratificación según estatus pueden ser examinados cuantitativamente desde el punto de vista de la autoidentificación de las personas en el contexto de su propia realidad. Con este enfoque, a partir de una clasificación de las personas en la sociedad elaborada por los propios individuos, analizamos de qué modo ellos se identifican con una posición social. Nuestro análisis se basa en una encuesta en que se solicitó a los participantes realizar un juego de clasificación de viñetas representativas de personas en la sociedad chilena. La encuesta fue aplicada en Chile en el año 2016 a una muestra de 2.000 individuos estadísticamente representativos de la población. Los resultados muestran los criterios que predominan al clasificar a las personas en la sociedad y qué influye en la definición de su posición social por parte de los individuos, quienes se autoidentifican mayoritariamente con una categoría baja en la sociedad. Finalmente, los datos obtenidos nos permiten establecer si las clasificaciones subjetivas incluyen desigualdades de género o étnicas. Discutiremos este trabajo empírico desde la perspectiva de un diálogo con los principales indicadores de clase social –como EGP–, examinando en qué medida la ocupación u otros factores son significativos en el autopercepción. Del mismo modo, debatiremos si existe una correspondencia con investigaciones basadas en escalas de estatus subjetivo, que tienden a mostrar el predominio de una identificación con una clase media. El proyecto de investigación contó con el apoyo de la agencia chilena de apoyo a la ciencia y tecnología (CONICYT Chile: proyectos Fondecyt 1150808 y 1190436).

Narratives and Counter-Narratives about Radicalization: Experiences of Moderation of an Online Communication Campaign

This paper presents the results of a cyber-ethnographic study. The research analyzes the dynamics that make, calm and increase the radicalization narratives. This study is part of the Oltre project (ISF - DG Migration and Home Affairs, EU) which directly involved 42 Italian and second generation youths in the dissemination and moderation of an online communication campaign in order to prevent radicalized behaviors. This paper illustrates how the young "moderators" interacted each other, highlighting how counter-narratives can represent useful tools for deconstructing "complex" issues such as radicalization. Furthermore, the paper shows (using social network analysis) how on the social media the communicative dynamics are influenced by the characteristics of virtual networks that convey media messages. Finally, this study elucidates the content analysis results, in order to compare narratives and counter narratives, identifying different meanings, specific vocabularies and relevant thematic clusters.

The Co-Design of a Counter-Narrative Social Campaign: Second Generation Youths Against Radicalization

This paper deals with the OLTRE project (ISF - DG Migration and Home Affairs, EU) funded for preventing the radicalization of the second-generation of migrants in Italy. This essay aims to study the production of an online communication campaign co-designed by second-generation youths. The four Universities engaged in the project, in order to collect the issues for the campaign made an in-depth

sociological research and an interdisciplinary social network analysis. We will present the results of the non-standard field research. Starting from the different dimensions of the risk of radicalization proposed by the kaleidoscopic overview of risk factors (Sieckelink and Gielen 2018: 5; Ranstorp 2016), we created a topic guide for the in-depth qualitative interviews, then we collected 42 interviews of second generation youths (18-30 years) in 7 Italian towns. Furthermore, we studied the theater performances taped during the laboratories made by second generation youths collecting narratives, representations, stories and emotions about their representation of the radicalization risk and protection factors. This corpus was used for the social communication campaign to prevent radicalization, engaging the research participants as key players, co-designing the counter-narrative contents (Institute for Strategic Dialogue, 2015). The paper study also the viral dissemination of the social communication campaign on the social network and the role of the moderators.

Positive Reputation Bias in Cryptomarkets. Validating Quantitative Ratings with Automatic Analyses of Feedback Texts.

Reputation systems establish trust in large anonymous online markets by allowing market participants to signal their qualities (e.g. trustworthiness, reliability). However, these systems face an important shortcoming – the overwhelming majority of the reviews that constitute market participants' reputations are positive (Hu et al., 2009). Furthermore, positive reputations seem to "inflate" more and more as the market grows. Previous research identifies concerns about damaging others' reputations and the fear of retaliation as likely drivers of increasing bias of market feedback. This suggests that peer-to-peer markets with more personal transactions and high potential of reputational damage are particularly susceptible to positive reputation inflation (Filippas et al, 2018).

We explore this possibility in cryptomarkets for illegal goods, where inflated seller reputations can present a threat to the health and safety of buyers. In the two markets we study, only buyers evaluate sellers – anonymously – minimizing the cost of negative evaluations stemming from retaliation. We perform analyses of digital trace data obtained from SilkRoad 1.0, an early market with a strong community spirit, and AlphaBay, a more mature professionalized market. We explore the development of the share of positive reviews over time, seeking differences in trends stemming from different market participant structures. We use automatic text analyses to evaluate trends in textual feedbacks compared to quantitative ratings. We ask whether buyers become increasingly biased towards leaving positive feedback or no feedback, rather than negative feedback, as markets mature. We explore possible causes of the bias by leveraging the information contained in textual ratings.

MACCHIONI, ELENA* (University of Bologna, Italy)

MAAM: Maternity as a Master. Corporate family responsibility and Innovative work-life balance measures

The aim of this paper is to analyse the social mechanisms through which a digital platform, offered by companies to women employees, allow them to balance their roles between work context and family life. The study carried out with qualitative methodology, through a semi-structured interview and a software analysis. The research involved 30 Italian female working mothers who used the tool. MAAM is a digital tool based on the lifelong learning approach. This tool through self-training sessions wants to develop mother's meta-reflexivity.

This process empowers women to transfer soft-skills developed in their maternity experience into soft-skills useful for the workplace organizations. We use the work-to-family/family-to work interface approach to analyse the effects of the role accumulation and the soft skills process transposition to verify the efficacy of the tools as a real social innovation in the work-life balance field. We observed that this social innovation process it triggers in a global mutation of cultural codes that characterized the maternity experience in the modern societies. That demonstrates a new codification of female role and maternity experience in the workplace organization, but already present in the civil society.

Data reveal that mothers that used MAAM they've become aware of the positive spillover between care maternity experience and job commitments. The acquisition of this capability allows working mothers to codifying the conflicting semantic between maternity and job inside a discursive universe founded upon the fundamental human skill of taking care of others. We suggest that this (innovative) process could contain a new gender paradox: the risk is to use the semantic of taking care to stigmatize specific social actors (women; mothers; female) through the burden of care.

Debunking Discourses in Mental Health Services: Interactional Analysis of Psychotherapeutic Contexts

In spite of recent advances in academic research, there still are few studies that qualify psychotherapy in terms of its sociology. These studies develop scientific interventions that conceive the notion of 'language-in-use' and 'everyday discourses' to the construction and implementation of analytical categories useful to Mental Health clinic, specially those concerning social idiosyncrasies of vulnerable populations, such as LGBT (lesbian, gay, bisexual and trans) people. Such discussion concerns both methodological and technical improvement of psychotherapy itself, and the qualification of 'psy' sciences (Psychiatry, Psychology and Psychoanalysis) as major areas for Mental Health care in public or private health services, as well as its interface with public policies and institutionalized clinical protocols (e.g., DSM V and ICD 11). We aim to describe and analyze interactional practices that emerge in the context of psychotherapeutic interactions in a private clinic specialized in mental health care directed to LGBT people in southern Brazil. We focus on (a) how the concepts of 'agenda setting' and 'epistemic domains' interfere with the supposed 'therapeutic course' of clinical interventions and (b) how the categorization process of the therapist's/clinician's self becomes a phenomenon relevant to the client's/patient's own self categorization. Due to its interpretative and microethnographic analytic procedures, we use Conversation Analysis (CA) as theoretical and methodological framework. The research corpus is composed of five hours of video-recorded interactions, which were transcribed and analyzed following CA principles. Results point to the frequent use of several linguistics/interactional practices to support social actions in the clinical setting. Linguistic and interactional analysis of participants' social roles, oriented by the categorization of their own self in clinical environments through talk-in-interaction, proved to be a potent theoretical-methodological approach to the qualification of Health Services in their multiple laminations (social, political, technological, and epistemological). Data are in Brazilian Portuguese.

Comprensión Epistemológica Del Sistema Social De La Vejez En Tres Subsistemas Casa Del Adulto Mayor "La Armonía", Residencia "San Juan" En Colima y "Centro De Convivencia De La Tercera Edad Del DIF Estatal Colima".

Introducción: Explorar el sistema y subsistema complejo se parte como un "proceso y no como un "acto" de coordinación de resultados" (García, Rolando, 2006, p. 99). Por lo que se presenta el trabajo exploratorio que se realizó dentro de tres subsistemas donde ofrecen atención para adultos mayores "Casa del Adulto Mayor La Armonía", "Residencia San Juan" y "Centro de Convivencia de la Tercera Edad del DIF Estatal Colima". **Objetivo:** Explorar el sistema social complejo vejez y envejecimiento para la comprensión del objeto de estudio a través de la autopercepción, percepción y representación social del adulto mayor y su contexto en diversos escenarios socioculturales, nivel educativo y socioeconómico. **Método:** Se empleó la observación participante, donde se usó la estrategia del juego, la conversación, el involucramiento en sus actividades con el fin de conocer y tener acercamiento al sistema social complejo vejez y envejecimiento. Asimismo se aplicó una entrevista no estructurada y una encuesta con el propósito de saber sobre la situación de los subsistemas, cómo obtener datos que enriquezcan la investigación. **Resultados:** La distinción entre los residentes de las casas hogar para adultos mayores y los que asisten al centro de convivencia, los segundos lleven una vida plena y la condición económica, familiar, etc. no ha sido obstáculo para sentirse con bienestar. En cambio en la casa hogar "la armonía" y Residencia "San Juan" tengas una posición solvente, precaria, familia o no familia solo esperan la muerte.
