2014 Annual Conference & Exhibition
Functional Foods, Nutraceuticals, Natural Health Products, and Dietary Supplements
14-17 October 2014, Istanbul - Turkey

Conference Co-Organizers
Dr. Fereidoon Shahidi (Canada)
Dr. Chi-Tang Ho (USA)
Dr. Debasis Bagchi (USA)
Dr. Cesarettin Alasalvar (Turkey)

Local Conference Chair
Dr. Cesarettin Alasalvar (Turkey)

Important Dates
Abstract Submission Deadline: July 07, 2014
Notification of Acceptance: July 18, 2014
Early Bird Registration Deadline: August 15, 2014

Conference Venue
Istanbul Military Museum & Culture Site

Indicaxanthin is a betalainic phytochemical from Cactus Pear Fruit (Opuntia Ficus Indica). We have recently showed that this compound is a reducing molecule, able to penetrate cells and counteract oxidative damage in vitro. Moreover, it behaves as a signalling molecule modulating specific redox-dependent pathways in vitro. Remarkably, indicaxanthin is highly bioavailable and has been suggested to play a key role in the antioxidative effects associated with the consumption of the fruit. In this work we have investigated the antioxidative and anti-inflammatory effects of indicaxanthin in an in vitro model of human corneal dysfunction.

Human corneal epithelial cells were cultured as previously described [5]. Antioxidative effects were evaluated as reactive oxygen and nitrogen species (RONS) production in H₂O₂-stimulated HCE, by flow cytometry. Anti-inflammatory effects were assessed as the release of TNF-α and IL-1β in LPS-activated HCE by ELISA.

Our results show that Indicaxanthin inhibits RONS production in H₂O₂-stimulated HCE in a concentration range between 5 and 50 μM with a maximum inhibition of 80.2% (P<0.001). These antioxidative effects were paralleled by a significant reduction of both IL-1β and TNF-α release in LPS-activated HCE by the phytochemical. Indicaxanthin, indeed, concentration-dependently inhibited the release of both cytokines with a maximum inhibition of 75.2 and 86.4% respectively (P<0.001).

Together these results indicated that indicaxanthin protects HCE exerting strong antioxidative and anti-inflammatory effects in vitro.
