# Educational Robotics in the Context of the Maker Movement

# Advances in Intelligent Systems and Computing

Volume 946

## Series Editor

Janusz Kacprzyk, Systems Research Institute, Polish Academy of Sciences,  
Warsaw, Poland

## Advisory Editors

Nikhil R. Pal, Indian Statistical Institute, Kolkata, India

Rafael Bello Perez, Faculty of Mathematics, Physics and Computing,  
Universidad Central de Las Villas, Santa Clara, Cuba

Emilio S. Corchado, University of Salamanca, Salamanca, Spain

Hani Hagra, School of Computer Science and Electronic Engineering,  
University of Essex, Colchester, UK

László T. Kóczy, Department of Automation, Széchenyi István University,  
Gyor, Hungary

Vladik Kreinovich, Department of Computer Science, University of Texas  
at El Paso, El Paso, TX, USA

Chin-Teng Lin, Department of Electrical Engineering, National Chiao  
Tung University, Hsinchu, Taiwan

Jie Lu, Faculty of Engineering and Information Technology,  
University of Technology Sydney, Sydney, NSW, Australia

Patricia Melin, Graduate Program of Computer Science, Tijuana Institute  
of Technology, Tijuana, Mexico

Nadia Nedjah, Department of Electronics Engineering, University of Rio de Janeiro,  
Rio de Janeiro, Brazil

Ngoc Thanh Nguyen , Faculty of Computer Science and Management,  
Wrocław University of Technology, Wrocław, Poland

Jun Wang, Department of Mechanical and Automation Engineering,  
The Chinese University of Hong Kong, Shatin, Hong Kong

The series “Advances in Intelligent Systems and Computing” contains publications on theory, applications, and design methods of Intelligent Systems and Intelligent Computing. Virtually all disciplines such as engineering, natural sciences, computer and information science, ICT, economics, business, e-commerce, environment, healthcare, life science are covered. The list of topics spans all the areas of modern intelligent systems and computing such as: computational intelligence, soft computing including neural networks, fuzzy systems, evolutionary computing and the fusion of these paradigms, social intelligence, ambient intelligence, computational neuroscience, artificial life, virtual worlds and society, cognitive science and systems, Perception and Vision, DNA and immune based systems, self-organizing and adaptive systems, e-Learning and teaching, human-centered and human-centric computing, recommender systems, intelligent control, robotics and mechatronics including human-machine teaming, knowledge-based paradigms, learning paradigms, machine ethics, intelligent data analysis, knowledge management, intelligent agents, intelligent decision making and support, intelligent network security, trust management, interactive entertainment, Web intelligence and multimedia.

The publications within “Advances in Intelligent Systems and Computing” are primarily proceedings of important conferences, symposia and congresses. They cover significant recent developments in the field, both of a foundational and applicable character. An important characteristic feature of the series is the short publication time and world-wide distribution. This permits a rapid and broad dissemination of research results.

**\*\* Indexing: The books of this series are submitted to ISI Proceedings, EI-Compendex, DBLP, SCOPUS, Google Scholar and Springerlink \*\***

# Preface

The volume “Educational Robotics in the Context of the Maker Movement” includes papers presented at the International Conference “Educational Robotics in the Makers Era-EDUROBOTICS 2018” held on October 11, 2018, in Rome. The conference was organized by the *Dipartimento di Ingegneria Informatica, Automatica e Gestionale “Antonio Ruberti”*, University “*La Sapienza*” of Rome (Italy, <http://www.dis.uniroma1.it/en>), EDUMOTIVA (Greece, [www.edumotiva.eu](http://www.edumotiva.eu)), the *Dipartimento di Ingegneria dell’Informazione*, University of Padua (Italy, <http://www.dei.unipd.it/en>). The conference was the 2018 edition of a sequence of scientific international meetings of researchers working in the Educational Robotics (ER) field, starting from the 1st International Workshop entitled “Teaching Robotics and Teaching With Robotics-TRTWR” organized in Venice in the context of the TERECoP project ([www.terecop.eu](http://www.terecop.eu)), followed by other TRTWR workshops (Darmstadt 2010, Riva Del Garda 2012, Padua 2014), and then generating the first edition of the “Educational Robotics in the Makers Era” conference held in Athens in 2016. Publications from those workshops have included open online proceedings, two special issues in the journals: *Themes in Science and Technology Education*, 2013 and *Robotics and Autonomous Systems Journal*, 2016, and the book “Educational Robotics in the Makers Era” (Springer 2017).

This book explores more deeply the connection between educational robotics and the maker movement which is currently inspiring new innovative ways to exploit technologies as educational “vehicles” for new ways of learning in and out of school, with a special focus on block-based programming environments, Do-It-Yourself electronics, 3D modelling and printing, the use of intelligent distributed systems, the IoT technology, gamification, and more. So empowered, Educational Robotics (in a broader sense) is proving a more and more fruitful field of development and experimentation both in formal and informal education settings, involving a continuously growing community of researchers and educators with interest in this field across EU and beyond. Starting from pedagogical premises that are the lessons learnt from constructivism, constructionism and social constructivism (Piaget, Papert, Vygotsky), current advances in Educational Robotics focus on the development of STEAM (Science, Technology, Engineering, Arts and

Math) education and the 21st-century skills: creativity, critical thinking, team working, and problem solving.

“Learning by doing” and “Learning by making” are the “mantras” around which the Maker Movement and its inspiring principles are successfully developed. Low-cost materials, free software, and a low access threshold are the pre-conditions to democratize access to new opportunities for learning through the 21st-century digital making technologies. The production of meaningful artefacts, where the “robotic” component can be more or less relevant, is an up-to-date interpretation of those “powerful objects to think with” that Papert considered crucial means for an effective and long-lasting education. The 2018 EDUROBOTICS conference was a valuable occasion to deepen these aspects with scientific contributions that deal with new proposals and innovative experimentations in this field.

The book includes 14 chapters plus six short papers coming from twelve different EU countries, the USA, and Israel.

The content of the book is organized into five sections

First section: Educational Robotics and the Maker Movement

Second section: Pedagogy behind Educational Robotics

Third section: Programming, Games, and Social Robots

Fourth section: Technologies for Educational Robotics

Fifth section: Short Papers Reporting Good Practices or Work in Progress (Presented in the Conference as Posters)

We thank the conference participants, academics, researchers, and educators from all the levels of education (primary, secondary, and tertiary), and the young researchers, PhD and postgraduate students, for their active participation and great contribution to the success of the conference and for authoring this book. Special thanks go to our Programme Committee members who have reviewed the papers and provided important help to authors to improve their manuscripts.

Finally, this book is dedicated to the memory of Edith Ackermann, the brilliant Swiss-American psychologist, collaborator of Seymour Papert at MIT and pioneer in studying the influence of technology on children’s learning, who passed away at the end of 2016.

March 2019

# Organization

## Programme Committee

Dimitris Alimisis	EDUMOTIVA (European Lab for Educational Technology) Greece
Richard Balogh	Slovak University of Technology in Bratislava
Ansgar Bredendfeld	Dr. Bredendfeld UG
Dave Catlin	Valiant Technology
Baran Cürüklü	Mälardalen University
G. Barbara Demo	Dipartimento Informatica, Università Torino
Amy Eguchi	Bloomfield College
Nikleia Eteokleous	Frederick University Cyprus
Alessandro Farinelli	Computer Science Department, Verona University
Paolo Fiorini	UNIVR
Luca Iocchi	Sapienza University of Rome
Ilkka Jormanainen	University of Joensuu
Ken Kahn	University of Oxford
Chronis Kynigos	Educational Technology Lab, University of Athens
Lara Lammer	ACIN-Vienna University of Technology
Wilfried Lepuschitz	Practical Robotics Institute Austria
Monica Malvezzi	University of Siena
Emanuele Menegatti	University of Padua
Emanuele Micheli	Scuola di Robotica Genoa Italy
Stefano Monfalcon	Town Museum of Rovereto
Michele Moro	University of Padova
David Obdržálek	Charles University
Pavel Petrovic	Comenius University
Alfredo Pina	Public University of Navarra

# Contents

## **Educational Robotics and the Maker Movement**

<b>Designing a Makerspace for Children – Let’s Do It</b> . . . . .	3
--	---

Sandra Schön, Martin Ebner, and Maria Grandl

<b>Enactive Robot Assisted Didactics (ERAD): The Role of the Maker Movement</b> . . . . .	16
---	----

Hagen Lehmann and Pier Giuseppe Rossi

<b>Introducing the Making Culture in Teacher Education: The eCraft2Learn Project</b> . . . . .	27
--	----

Rene Alimisi, Dimitris Loukatos, Emmanouil Zoulias,  
and Dimitris Alimisis

## **Pedagogy Behind Educational Robotics**

<b>Trans-constructionist Prototyping with a Rare Vintage</b> . . . . .	45
--	----

Micheál Ó Dúill

<b>Creativity Thinking Skills Promoted Through Educational Robotics</b> . . .	57
---	----

Nikleia Eteokleous, Efi Nisiforou, and Christos Christodoulou

<b>From Digital Fabrication to Meaningful Creations: Pedagogical Perspectives</b> . . . . .	69
---	----

Calkin Suero Montero, Christian Voigt, and Kati Mäkitalo

<b>Badges Are Back! - Fostering Self-assessment During Personalised Learning in Making and Digital Fabrication</b> . . . . .	83
--	----

Francesca Agatolio, Calkin Suero Montero, Michele Moro,  
Andrea Cavazzini, and Emanuele Menegatti

## **Programming, Games and Social Robots**

<b>Exploring Escape Games as a Teaching Tool in Educational Robotics</b> . . . . .	95
--	----

Christian Giang, Morgane Chevalier, Lucio Negrini, Ran Peleg,  
Evgeniia Bonnet, Alberto Piatti, and Francesco Mondada

<b>Teaching Robot Programming for Industry 4.0</b> . . . . .	107
--	-----

Elisa Tosello, Nicola Castaman, Stefano Michieletto,  
and Emanuele Menegatti

<b>Imagine the Future with Social Robots - World Robot Summit's Approach: Preliminary Investigation</b> . . . . .	120
---	-----

Amy Eguchi and Hiroyuki Okada

## **Technologies for Educational Robotics**

<b>Interdisciplinary Teaching with the Versatile Low-Cost Modular Robotic Platform EDMO</b> . . . . .	135
---	-----

Rico Möckel, Lucas Dahl, and Seethu M. Christopher

<b>Engaging Learners in Dialogue Interactivity Development for Mobile Robots</b> . . . . .	147
--	-----
